What is Metropolis-Within-Gibbs or variable-at-a-time

Metropolis Hastings?

Accept/reject separately for each parameter

What about the adaptive part?

Update  $\gamma^2$  every 50 iterations.

What is Metropolis-Within-Gibbs or variable-at-a-time Metropolis Hastings?

Accept/reject separately for each parameter

What about the adaptive part?

Update  $\gamma^2$  every 50 iterations.

## The MCMC algorithm:
